11- (Currently amended) Modular plant pot with a water drainage system comprising:

25

- lengthwise modules having inferior lateral double walls with a height of 1/3 of the side of the module and with spaced holes on top, said modules having an U shape, and being connected together;

- angular modules having inferior lateral double walls with spaced holes, having an U shape, and being connected together with said lengthwise modules;

30

- support-brackets with U shape for said connection together of said lengthwise modules and said angular modules, said support-brackets having double walls to lodge the ends of said double walls of said connected lengthwise and angular modules; and

35

- closing covers having double walls to lodge the ends of said double walls of said lengthwise and angular modules when said closing covers are coupled to open ends of said modular plant pot;

wherein said inferior lateral double walls with spaced holes of said lengthwise modules and of said angular modules and said double walls of said support-brackets and

of said closing covers to lodge the ends of said double walls of said connected lengthwise and angular modules make up said water drainage system.

- 5 ~~of the type that include lengthwise modules and angular modules both provided with inferior lateral double walls (20) with a height of 1/3 of the lateral height of said lengthwise modules and angular modules for purposes of evacuating excess water, support brackets and closing covers,~~
- wherein:

~~said lengthwise modules are lengthwise reinforced modules (5) which comprise:~~

- 10 ~~- second double lateral walls, said second double lateral walls featuring a series of nerves within their interiors, said second double lateral walls branching from the said inferior lateral double walls (20); and~~
- ~~- double bottom walls along the bottom surface, said double bottom walls featuring a series of nerves within their interiors,~~
